English - B2

Projects

Weather App

The Weather App is an application that allows you to check the current weather for any city in the world. By utilizing a weather API, simply enter the city name, and the app will display temperature information to you.

ToDoList & Auth System

The application is a ToDoList with an authentication system that allows users to log in and register. It is built using the Django framework and utilizes a PostgreSQL database for data management. The application enables users to create, update, and delete tasks in their ToDo list, providing a convenient way to manage their daily tasks and responsibilities
